## Math 340 / 640 Fall 2023 Final Examination

Professor Adam Kapelner
December 18, 2023

evaluation of a student's performance are prohibited. Examples of such activities include but are not limited to the following definitions:  Cheating Using or attempting to use unauthorized assistance, material, or study aids in examination or other academic work or preventing, or attempting to prevent, another from using authorized assistance material, or study aids. Example: using an unauthorized cheat sheet in a quiz or exam, altering a grade	ode of Academic Integrity
Activities that have the effect or intention of interfering with education, pursuit of knowledge, or fai evaluation of a student's performance are prohibited. Examples of such activities include but are not limited to the following definitions:  Cheating Using or attempting to use unauthorized assistance, material, or study aids in examination or other academic work or preventing, or attempting to prevent, another from using authorized assistance material, or study aids. Example: using an unauthorized cheat sheet in a quiz or exam, altering a grade	he success of this educational mission is a commitment to the principles of academic integrity. Every other of the college community is responsible for upholding the highest standards of honesty at all times. dents, as members of the community, are also responsible for adhering to the principles and spirit of the
or other academic work or preventing, or attempting to prevent, another from using authorized assistance material, or study aids. Example: using an unauthorized cheat sheet in a quiz or exam, altering a grade	Activities that have the effect or intention of interfering with education, pursuit of knowledge, or fair uation of a student's performance are prohibited. Examples of such activities include but are not limited
exam and resubmitting it for a better grade, etc.	ther academic work or preventing, or attempting to prevent, another from using authorized assistance,
I acknowledge and agree to uphold this Code of Academic Integrity.	knowledge and agree to uphold this Code of Academic Integrity.

## Instructions

Full Name \_\_\_

This exam is 110 minutes (variable time per question) and closed-book. You are allowed **three** 8.5" × 11" page (front and back) "cheat sheets", blank scrap paper (provided by the proctor) and a graphing calculator (which is not your smartphone). Please read the questions carefully. Within each problem, I recommend considering the questions that are easy first and then circling back to evaluate the harder ones. Show as much partial work as you can and justify each step. No food is allowed, only drinks.

## $\begin{tabular}{ll} Problem 1 & Below are mostly unrelated problems. \end{tabular}$

(a) [8 pt / 8 pts] Let  $X \sim \chi_k^2$ . Find Mode[X] as a function of k and indicate which values of k are valid for the expression to be the mode.

(b) [10 pt / 18 pts] Let  $X \sim \text{BetaBinomial}(n, \alpha, \beta)$ . Find k(x).

(c) [8 pt / 26 pts] Let  $X \sim \text{Poisson}(\lambda)$  and  $Y = X \mathbb{1}_{X>0}$ . Find  $p_Y(y)$ . Your answer must be only a function of  $\lambda$  and y.

(d) [5 pt / 31 pts] Let  $X \sim \text{Weibull}(0.5, 0.5)$ . Let  $a = \mathbb{P}(X > 17)$  and let  $b = \mathbb{P}(X > 37 \mid X > 20)$ . Circle the larger quantity: a or b

(e) [13 pt / 44 pts] Let  $Y \mid X = x \sim \text{Gamma}(x+1, \beta)$  and  $X \sim \text{Geometric}(p)$ . Find  $f_Y(y)$  and identify it as one of the brand name rv's we studied and identify its parameter(s). Hint:  $e^a = \sum_{i=0}^{\infty} \frac{a^i}{i!}$ . Advice: leave this problem for last.

(f) [8 pt / 52 pts] Let  $Y \mid X = x \sim \text{Exp}(x)$  and  $X \sim \text{InvGamma}(\alpha, \beta)$ . Find  $\mathbb{E}[Y]$ .

(g) [8 pt / 60 pts] Let  $X_1, \ldots, X_{37} \stackrel{iid}{\sim} \text{ParetoI}(1, 53)$ . Let  $X_{(k)}$  denote the kth order statistic. Find  $f_{X_{(17)}}(x)$  as a function of x only.

(h) [7 pt /67 pts] Let Y=aX+b where  $a,b\in\mathbb{R}$ . From the definition of the ch.f., prove  $\phi_Y(t)=e^{iub/a}\phi_X(u)$  where u=at.

Let  $\mathbf{Z} \sim \mathcal{N}_2(\mathbf{0}_2, \mathbf{I}_2)$ . Let  $\mathbf{X} = \boldsymbol{\mu} + A\mathbf{Z}$  where  $\boldsymbol{\mu} = \begin{bmatrix} 1 \\ 2 \end{bmatrix}$  and  $A = \begin{bmatrix} 1 & -1 \\ -1 & 0 \end{bmatrix}$ . Use these definitions for all of the following questions.

- (i) [3 pt / 70 pts] What is  $S_{X_2}$ ?
- (j) [6 pt / 76 pts] Find  $f_{\boldsymbol{X}}(\boldsymbol{x})$  as a function of  $x_1, x_2$  only.

(k) [8 pt / 84 pts] Find  $f_{X_2}(x)$  as a function of x only.

(l) [7 pt / 91 pts] Find  $\phi_{\boldsymbol{X}}(\boldsymbol{t})$  as a function of  $t_1, t_2$  only.

(m) [9 pt / 100 pts] Compute  $\mathbb{E}\left[X_1X_2\right]$  numerically.
